DATA SHEET Silane 400 DLC®

Silane 400 DLC is an organoalkoxysilane-silicate blend for use with peroxide curing systems. Silane 400 DLC has a high degree of hydrolytic stability and can be substituted for A-172 DLC on a one-to-one basis with better resultant performance. Ethanol can be generated during hydrolysis, when the coupling reaction takes place with minerals such as clay, talc and silica.
